

Anti- IZUMO1 antibody, rat monoclonal (#125)

73-045 100 µg

Shipping and Storage: Shipped at 4°C or -20°C and store at -20°C.**Immunogen:** Mouse sperm**Form:** 1.0 mg/ml Purified IgG in PBS- with 50% glycerol. Filter-sterilized. Azide- and carrier- free.**Isotype:** Rat IgG2a κ **Reactivity:** Mouse and human. Not tested in other species.**Applications:**

1. Western blotting (1/1,000 dilution)
2. Immunoprecipitation (1/100 dilution)
3. Immunofluorescence staining (1/250 dilution)

Key words: Acrosome reaction, Membrane fusion, Protein trafficking, IZUMO1, Sperm-egg fusion**Background:** Essential sperm cell-surface protein required for fertilization by acting as a ligand for FOLR4/JUNO receptor on egg. The IZUMO1:FOLR4/JUNO interaction is a necessary adhesion event between sperm and egg that is required for fertilization but is not sufficient for cell fusion. The ligand-receptor interaction probably does not act as a membrane 'fusogen'**Molecular mass:** 44,885 Da with 307 amino acids (mouse). Post-translational modification: Processing of N-terminal signal peptide with 21 amino acids. N-Glycosylation and phosphorylation.**Expression:** Testis (low level) and sperm (high level). Not expressed in other organs.**Database Links:** UniProtKB [Q9D9J7](#) (mouse IZUMO1), UniProtKB [Q8IYV9](#) (human IZUMO1)**Reference:** This antibody was used in the following publications.

Fig.1 Identification of IZUMO1 protein in sperm lysate of wild type mouse but not in that of IZUMO1 knock-out mouse by western blotting with anti-IZUMO1 monoclonal antibody #125).

Proteins in the lysates (10 μ g) were separated on SDS-PAGE, electro-blotted to PVDF membrane and incubated with anti-IZUMO1 antibody (#125) at 1/1,000 dilution.

Fig.2 Analysis of IZUMO1 protein in the lysates of mouse testis and sperm by western blotting with anti-IZUMO1 antibody (#125).

Proteins in the lysates were separated on SDS-PAGE (10~20% gradient gel) electro-blotted to PVDF membrane and incubated with anti-IZUMO1 antibody (#125) at 1/1,000 dilution. As the second antibody, goat anti-rat IgG antibody conjugated with HRP (Abcam; ab97057) was used at 1/10,000.

Fig.3 Analysis of IZUMO1 protein in the lysate of human testis by western blotting with anti-IZUMO1 antibody (#125).

Proteins in the lysates were separated on SDS-PAGE (10~20% gradient gel) electro-blotted to PVDF membrane (wet system) and incubated with anti-IZUMO1 antibody (#125) at 1/1,000 dilution. As the second antibody, goat anti-rat IgG antibody conjugated with HRP (Abcam; ab97057) was used at 1/10,000.

Fig.4 Immunoprecipitation of IZUMO1 protein from lysate of mouse sperm by using anti-IZUMO1 antibody (#125).

Mouse sperm lysate (1.5 mg protein in 1ml) solubilized with 1% Brij 97 was incubated with anti-IZUMO1 antibody (10 μ g) and protein G beads. Proteins eluted from the beads were analyzed by western blotting using the same antibody.

Fig.5 Immunofluorescence staining of IZUMO1 protein in mouse spermatozoa with anti-IZUMO1 antibody (#125).

Spermatozoa was spotted onto slide, air dried, fixed with ice-cold 100% ethanol and rinsed with PBS. The slide was incubated with anti-IZUMO1 antibody (#125) at 4 μ g/ml. The slide was then incubated with Alexa Fluor 488-conjugated anti-rat IgG. The stained cells were observed under a fluorescence microscope.
